

Double Tall Latte with a shot of Solar

at Fremont Coffee
Seattle, Washington

After review and research Chris Webb, owner of Fremont Coffee decided that a Solar Hot Water System would be the most cost effective way to work solar into the business plan for Fremont Coffee LLC. Since Fremont Coffee is located in a 1904 historic house, there was no latitude for remodel to accommodate Solar. So with that, the problem the hot water system was by far the most cost effective and highest dollar savings way to go

Sunergy Systems designers decided that an 80 tube Apricus, evacuated tube hot water system would be the best solution for the amount of roof space available.

“From the get go, we noticed a 60% savings in our natural gas bill in the first year. It was a very overcast year in the second year and the saving were less, more in the 45% saving range,” said Webb.

The system works, the crew was great and the performance and follow up has always been there.

- Chris Webb, Fremont Coffee LLC

Fremont Coffee

In general Webb says he has seen the bill drop from \$100-\$200 per month to \$15-\$90 per month, depending on the weather. Also, their use of hot water has only increased over the years.

“The system has worked as well as expected if not better and the savings for Fremont Coffee LLC have more than justified the initial costs. Add to that the benefits of helping to save the environment and it is a win win for all.”

“Now what I want to know is, how much more can I do?”

The system has worked as well as expected if not better.

- Chris Webb, Fremont Coffee LLC
